## POLICY BRIEF: Agroforestry To Support Migrants And Rural Households!

**Policy- and decision-makers** can contribute by making agroforestry visible and promoting agroforestry projects and policies. For instance, by creating rural credit systems, and supporting knowledge transfers and incentives to invest in agroforestry practices, which are culturally, gender and migrant sensitive.

**Agroforestry Network's policy brief** addresses the interactions between agroforestry and migration. The aim of the brief is to improve the understanding of how policy and programs can be developed to support agroforestry practices that enable and support sustainable livelihood of people in the context of migration.
